# 1.0 Introduction

---

This document describes the Dynamic Device Personalization (DDP) functionality supported by the Intel® Ethernet Controller X710/XXV710/XL710 starting with firmware version 6.01.

The DDP profile (0x8000000E) contains the X710/XXV710/XL710 parser graph for Radio Fronthaul.

This Classification offload is required for FlexRAN fronthaul to enable filtering of data packets based on their unique subtype (Timing packets, PUSCH and PRACH packets).

In FlexRAN LTE packets VLAN ID represent Cell ID and need to be filtered based on the packet SubType. This filtering is expected to be offloaded to NIC in order to free additional CPUs.
